EDUCATION

Bachelor of Science in Computer Science

May 2026

University of South Florida (USF), Tampa, FL

Key specialized courses: Data Structures, Algorithms, Databases, Software Engineering, Cryptography, Secure Coding

SKILLS

Programming Languages:	Python, JavaScript, TypeScript, SQL, C#, C, COBOL, Java Exposure
Frontend Development:	HTML, CSS, JavaScript, TypeScript, Angular, React, TailwindCSS, Responsive UI Development, UI Components
Backend and APIs:	REST APIs, API Integration, Backend Integration, System Integrations, SQL Databases, MySQL, Data Flow Optimization
AI and Automation:	OpenAI APIs, LLM Applications, Prompt Engineering, Agentic AI, Workflow Automation, Chatbot Systems, Voicebot Systems, AI Applications
Software Engineering:	Application Development, Testing and Debugging, Technical Documentation, SDLC, Agile/Scrum, Code Review Concepts, Quality Assurance
Tools and Platforms:	Git, GitHub, VS Code, Visual Studio, Jira, Docker Containers, Database Query Tools, AWS Exposure, CI/CD Concepts
Core Concepts:	Data Structures and Algorithms, Object Oriented Programming, Problem Solving, System Design Concepts, Reliability, Security Awareness, Team Collaboration

RELEVANT EXPERIENCE

AI & Automation Developer , Icubo Solutions/CariAI, Remote	June 2025 – Present
- Developed and deployed software applications using OpenAI APIs, REST APIs, and backend services to support customer support and debt collection workflows. - Integrated applications with backend systems, improving automation, data flow, workflow reliability, system functionality, and customer experience. - Tested, debugged, documented, and optimized automation workflows, reducing manual task time by 40% and improving operational efficiency by 30%.	
Frontend Developer , Olympus/Artemisa, Remote	July 2024 – January 2025
- Developed responsive web applications using Angular, TypeScript, HTML, CSS, and TailwindCSS. - Integrated frontend components with REST APIs and backend systems to support dashboards, analytics, reporting workflows, and application functionality. - Collaborated with UI/UX, data, and technical teams to translate requirements into functional web interfaces while improving performance and usability.	
Frontend Developer Intern , Consware, Onsite	June 2024 – July 2024
- Developed frontend components for logistics and transport management applications using Angular and modern web technologies. - Integrated UI components with backend systems, improving application functionality, data flow, and user workflows. - Optimized frontend components through debugging and testing, improving application usability, reliability, and performance.	

KEY ACADEMIC PROJECTS

InCollege Professional Networking App , USF	Jan 2026 – May 2026
- Developed a LinkedIn-style networking application for college students using COBOL, VS Code, Git, GitHub, and Docker containers. - Applied Scrum methodologies through sprint-based delivery, user stories, demos, and rotating roles as Scrum Master, Developer, and Tester. - Collaborated across development, testing, planning, and communication responsibilities to support successful team delivery.	
Stock Market Candlestick Chart Application , USF	Jan 2026 – May 2026
- Built a C#/.NET application in Visual Studio to process CSV stock market data and generate candlestick charts. - Implemented data parsing, visualization, and calculation features to support stock trend analysis and financial data interpretation. - Applied object-oriented programming, debugging, and data analysis techniques to build a functional financial analysis tool.
